OUR STORY

Foamco Canada was founded by two industry veterans – brothers CJ & MJ Shah – more than 30 years ago. In 1987, they started cutting foam in a small facility at 801 Flint Rd.

Today, the business is housed in a 65,000 sq ft building in Vaughan. The company uses fully automated machinery and special manufacturing software developed by Microsoft to cut foam and fibre at rapid speeds.

Being the largest independent foam fabricator, we continue to push the boundaries, innovating and leading the industry. We were the first to fabricate visco-elastic memory foam, to distribute natural latex, offer soy-based eco-foam, switch to a water-based adhesive, and to run our plant on “green” electricity.

From humble beginnings, Foamco Canada is now a significant supplier to the furniture, bedding, healthcare, and packaging industries. Our customers are leaders in their field, and manufacture products as varied as world-class office seating, quality critical infant safety products, pressure-relieving antimicrobial hospital mattresses, and stylish upholstery.

The personal bonds with our employees are the structure that holds the company together.

Investing more time and money in employee advancement and training, including top-tier workplace safety, career development, incentives and empowerment.

Being the largest independent foam fabricator, we continue to push the boundaries, innovating and leading the industry.

GET THE REST YOU NEED

Sometimes, the pace of modern life barely gives you time to stop and rest. It can make getting a good night's sleep on a regular basis seem like a dream.

But sleep is as important for good health as diet and exercise. Good sleep improves your brain performance, mood, and health.

Not getting enough quality sleep regularly raises the risk of many diseases and disorders. These range from heart disease and stroke to obesity and dementia.

Why do we need to sleep?

People often think that sleep is just "down time," when a tired brain gets to rest, says Dr. Maiken Nedergaard, who studies sleep at the University of Rochester.

But that's wrong," she says. While you sleep, your brain is working. For example, sleep helps prepare your brain to learn, remember, and create.

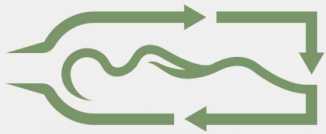

Nedergaard and her colleagues discovered that the brain has a drainage system that removes toxins during sleep.

"When we sleep, the brain totally changes function," she explains. "It becomes almost like a kidney, removing waste from the system."

- 4 Distribution**
 - Drop Ship programs where applicable
 - Prepaid shipping to your store
 - Rolled and Compressed for easy shipping

OUR ADVANTAGES

1 BETTER PRICING

Our focus on custom foam fabrication is our strength. We are the largest foam fabricator in Canada, which means we negotiate extremely competitive buying prices for our raw material, and we are not reliant on any one source of foam. We source our raw material from all the major foam manufacturers, which allows us to offer you a choice in quality and budget.

2 WIDER RANGE

Not all foam is equal and certain grades perform better than others in specific applications. We compare the quality of foam grades across suppliers and only select the best quality for our customers. Some foam manufacturers have extremely old production lines, restricting their ability to produce certain grades of foam well. With our buying power, we are able to provide you with a wider range of higher quality foams compared to any other foam fabricator in Canada.

3 FASTER SERVICE

In 2015, we upgraded our facility with state of the art machinery that maintains our competitive edge in Canada and allows us to deliver the highest quality products to you. We can now QUOTE, DESIGN, CUT and DELIVER foam faster than anyone in the market, while maintaining the highest standards to ensure you receive the best service and pricing.
